

SUHAS DARA

daras@purdue.edu • <https://suhasdara.me> • <https://linkedin.com/in/suhas-dara>

EDUCATION

- Purdue University**, MS in ECE - focus on AI and Signal Processing 2025 - 2027
- Research: Computational Neuroscience under Dr. Joseph Makin
 - Relevant Coursework: Statistical Learning and Inference, Digital Signal Processing, Deep Learning
- The University of Texas at Austin**, BS in Computer Science, High Honors, 3.98/4.0 GPA 2017 - 2021
- Research: Computer Vision at Peter Stone Laboratory
 - Relevant Coursework: Data Mining, Neural Networks, Natural Language Processing, Autonomous Robots

RESEARCH

- Speech Decoding from Utah Array signals**, *Graduate Researcher* 09/2025 - Present
- Improving existing neural network architectures to result in better speech decoding from Utah Array neural signals as part of a Kaggle competition using deep learning and linguistics techniques.
- Corner Detection Algorithm**, *Undergraduate Researcher* 08/2018 - 05/2019
- Created an operational door sign corner detection algorithm using convolutional neural networks that can be used for robot localization. Technologies used include Python, C++, PyTorch, and Darknet.

EXPERIENCE

- Purdue University**, *Graduate Teaching Assistant* 08/2025 - Present
- Creating and grading homework assignments and exams for the Python for Data Science course.
- Two Sigma**, *Data Engineer* 02/2022 - 05/2025
- Modernized important legacy data pipelines with a newer tech stack like BigQuery, DBT, and observability tools.
 - Worked in Java, Python, and SQL with various wide foundational datasets to satisfy business needs for modeling and trading.
- Two Sigma**, *Software Engineering Intern* 06/2021 - 08/2021
- Measured robustness and precision of financial simulations.
 - Generated HTML reports of analysis results using Jinja that are still in use today, and gained more experience with Python, Pandas, NumPy, Matplotlib.
- Microsoft**, *Software Engineering Intern* 05/2020 - 08/2020
- Refined the downloading pipeline for the Azure Stack Hub devices and improved the customer experience.
 - Worked with job systems in C# and .NET Framework to implement intermediate downloading to local storage accounts. Also gained familiarity with Azure.
- Adobe**, *Software Engineering Intern* 05/2019 - 08/2019
- Developed an approval workflow mechanism for AdCloud's Creative Management Platform's targeted advertising.
 - Developed Springboot API endpoints in Java to assist the approval workflow mechanism. Also gained familiarity with FasterXML, and MySQL.
- Qualys Security TechServices**, *Software Engineering Intern* 06/2018 - 08/2018
- Developed two MERN, WebSocket, and UDP based applications to load test a cloud platform Passive Scanner micro-service, and a Network Access Control appliance.
 - Gained familiarity with the MERN stack, concurrency, and network tools.

MERITS

- Certificate:** Signal Processing Problems, solved in MATLAB and in Python 01/2026
- Award:** True Grit, Two Sigma 05/2023

SKILLS

- Programming Languages** Python, Java, SQL, JavaScript, C++, C, MATLAB
- Technologies** PyTorch, NumPy, Linux, Bash, GCP, HTML, CSS
- Math** Calculus, Probability, Linear Algebra
